
flask-widgets Documentation

Release 0.2 alpha

Bruce Doan

Nov 19, 2017

Contents

1	Installing Flask-Widgets	3
2	Set Up	5
3	Register Widgets	7
4	Render Widgets in Template:	9
5	Notes:	11
	Python Module Index	13

This extension provides basic template widget feature for [Flask](#)

CHAPTER 1

Installing Flask-Widgets

Install with **pip**:

```
pip install flask-widgets
```

CHAPTER 2

Set Up

Widgets is managed through a `Widgets` instance:

```
from flask import Flask
from flask.ext.widgets import Widgets

app = Flask(__name__)

widgets = Widgets(app)
```

You may also set up your `Widgets` instance later at configuration time using **`init_app`** method:

```
widgets = Widgets()

app = Flask(__name__)
widgets.init_app(app)
```

CHAPTER 3

Register Widgets

To register a single widget or a group of them, you will use the `widget()` and `position()` decorators:

```
@widgets.widget('title')
def title():
    return 'Flask-Widget example'

@widgets.position('sidebar', order=1)
def sidebar_featured_items():
    return dict(the='variables', go='here')
```

The example above will register a standalone widget named `title` and position `sidebar`

To reorder the widgets in a position, adjust the `order` variable, widget with less order will render first

Widget method must return a *dict* of variables or a string, in case it returns a *dict*, Widgets will render them with a template has same name as the method `widgets/sidebar_featured_items.html` You can register as many positions and the number of widgets for them as you want.

CHAPTER 4

Render Widgets in Template:

You will use template methods `:meth'widget'` and `:meth'widgets'` to render widgets:

```
<!DOCTYPE html>
<html>
  <head>
    <title>{{ widget('title') }}</title>
  </head>
  <body>
    <div style="border:1px solid #ccc">
      {{ widgets('header') }}
    </div>
    Template body
    <div style="border:1px solid #ddd">
      {{ widgets('footer') }}
    </div>
  </body>
</html>
```

Widgets will render registered widgets for you, if you need

CHAPTER 5

Notes:

- The extension is in development, use it ask your own risk
- If you have better ideas or any suggestion please feel free to contact me
- If you can improve this document, please help!
